

“Dated April 2015

Just Trees donated 2 *Ficus natalensis* tree towards a trial project in Langrug, Franschhoek. The trees are being used in Grey Water Filtration Tree Pits where the tree pits are constructed as part of a grey water bio-mimetic solution to handling contaminated grey water run-off originating from informal settlements. This problem is being addressed by the Western Cape Government in association with the Department of Water Affairs.

The Grey Water Filtration Tree Pits are being developed by a coalition of partners led by Biomimicry South Africa.”

APRIL 24, 2015

Dear Cael,

We had a very successful day at Longnug planting the two trees that you kindly donated. We expect that these greywater ~~tree~~ filtration tree pits will deeply impact the community in this specific area. In due time we hope to expand the project throughout the entire community, only to increase the positive impact of remedifying polluted waters down stream and in the community itself. We are privileged to have your involvement in the project at this stage and look forward to developing a lasting relationship.

Thank you again for your donation and we look forward to being in touch.

Sincerely,

Jay Thrasher & Max Rome
